

Content Management

A Single Platform to Manage Safety Documents and Data

Content Management supports the creation and maintenance of a Pharmacovigilance System Master File (PSMF), PV Agreements (PVA) and other safety content.

Key Benefits

More Effective Collaboration

Easily share pharmacovigilance documents internally and externally to enable more effective collaboration across quality, regulatory, clinical and safety teams.

Strategic decision support

Establish an accessible, intuitive, and easily searchable source of truth to better align business processes and support strategic decisions.

Regulatory Compliance

Readily comply with industry regulations such as the European Medical Agency's PSMF for companies who are marketing authorization holders (MAHs), or who filed a marketing authorization application (MAH).

Audit and Inspection Readiness

Improve audit and inspection readiness with audit reporting and tracking that shows detailed changes and version history of pharmacovigilance documents.

Enable Intelligent Safety Content Management

Operational Efficiency.
Inspection Readiness.
Regulatory Compliance.

Deliver Real Value with Content Management

Secure SaaS Platform with Controlled Access

Web-based platform for internal and external users to centrally manage safety content such as PSMF and PV agreements.

Dashboards and Reports

Standard dashboards and reports provide transparency to the status of content and processes, enabling users to identify potential bottlenecks and mitigate compliance risks.

Configurable Workflows

Automatically route content for review and approval to align with business processes, and trigger workflows based on document expiration and periodic review notification.

Comprehensive Audit Trail

Detailed audit trails to log activity throughout a document's history - including approvers and reviewers, status changes, execution of signature and more.
