

Real-Time Digital Connection, Wherever You Are

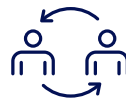

Reporter utilizes secure mobile and web applications that make it easy for stakeholders in the field to seamlessly provide and access the latest safety and medical information.

Key Benefits

Streamlined Field Reporting

Drive higher-quality compliance by making it simple for stakeholders in the field to report adverse events in accordance with regulatory requirements.

On-The-Go Collaboration

Increase user productivity via a cloud-based platform where stakeholders can seamlessly submit and access information using mobile and web applications.

Ecosystem Harmonization

Ensure a seamless flow of information with out-of-the-box integrations with downstream safety, medical information, and CRM systems.

Global Compliance

Be prepared to manage growing operations with a scalable, cloud-based solution that is proven across global markets.

Deliver real value with Reporter.

Features

One-Stop Solution

Provide one portal for medical representatives, health care professionals, patients, and others to report adverse events, submit medical inquiries, and access content.

Mobile and Web Reporting

Report adverse events using our mobile application and web portal for faster reporting from hospitals, clinical trial sites, and other field locations.

Safety System Integration

Out-of-the-box integrations with MultiVigilance and other third-party safety systems enable a seamless flow of data to safety case processing.

Comprehensive Compliance

We maintain up-to-date compliance with all the latest regulations, using our vast safety domain experience to ensure compliant field data collection.

Global Scalability

Our solution is highly suitable for global rollouts, with a proven track record of global implementations, including support for more than 18 languages.

A Single Vendor

Establish a single, end-to-end vendor by integrating Reporter with your larger ecosystem, including safety, medical information, and CRM systems.
